## 【学习笔记】postman测试脚本

- @author:sunshijang
- @date:2021-03-10
- Quest:
- Method:
  - Get
- QParam:

```
*{*
'version':'1',
'appid':'74194351',
'appsecret':'dAH6jTns',
'city':'永昌',
'cituid':'101160602'
```

## Tests Script:

```
//响应状态码
pm.test("Status code is 200", function () {
pm.response.to.have.status(200);
});
//响应时间
pm.test("Response time is less than 200ms", function () {
pm.expect(pm.response.responseTime).to.be.below(400);
});
//响应消息头
//写法一:
pm.test("存在content-type", function () {
pm.response.to.have.header("Content-Type");
```

```
});
//写法二:
tests['存在content-type']=postman.getResponseHeader('content-type');
//响应数据
//tests['数据包含永昌']=responseBody.has('永昌');
var data = JSON.parse(responseBody);
tests['响应状态码是否等于200'] = responseCode.code===200;
tests['返回信息中包含永昌'] = data['city']==='永昌';
tests['返回信息中包含中国'] = data['country']==='中国';
tests['当前温度低于25度'] = parseInt(data['data'][0]['tem'].split('℃')
[0])<=25;
//写法一:
tests['当天可以外出活动']=data['data'][0]['air_tips'].has('可以外出')
//写法二:
var response_body=pm.response.json();
pm.test('当前天气情况良好',function(){
pm.expect(response_body['data'][0]['air_level']).to.eql('良');
});
//写法一:
tests['has yongchang']=responseBody.has('yongchang');
//responseBody.has()针对中文字符串无效
//写法二:
pm.test("has yongchang", function () {
pm.expect(pm.response.text()).to.include("yongchang");
});
//方法一:
tests['content-type是app/json']=postman.getResponseHeader('content-
type')==='application/json';
/方法二:
pm.test('content-type是app/json',function(){
pm.expect(pm.response.headers.get('content-
type')).to.eql('application/json');
});
```

```
tests['success post request']=responseCode.code===200 ||
responseCode.code===201;
//方法一:
tests['请求响应时间小于200ms']=responseTime<200;
//方法二:
pm.test('请求响应时间小于200ms',function(){
pm.expect(pm.response.responseTime).to.be.below(200);
});
var response_body=pm.response.json();
 pm.test('当前天气情况良好',function(){
 pm.expect(response_body['data'][0]['air_level']).to.eql('良');
});
 const jsondata=pm.response.json();
 pm.test('存在12号的天气数据信息',()=>{
 pm.expect(jsondata['data'][2].day).to.eql('12日(星期五)');
 pm.expect(jsondata['data'][2].date).to.eql('2021-03-12');
 pm.expect(jsondata['data'][2].week).to.eql('星期五');
 pm.expect(jsondata['data'][2].wea_day).to.include('多云');
 pm.expect(jsondata['data'][2].date).to.eql('2021-03-12');
});
```
